Message From The Head

Decision makers in business, government and even at the household level use economics to help them make decisions. In business, questions related to location, efficiency, pricing, as well as research and development can all be enhanced through the use of economic techniques. Similarly, public decision-makers employ economists and economic techniques to identify policy options and make a choice between the alternatives. Individuals on the other hand, might want to evaluate whether or not it makes sense to pursue a graduate degree and may therefore employ economic tools to help inform their decision.

Economists are therefore playing a leading role in helping firms and countries to enhance their performance and navigate the uncertainty created by globalisation. The Department of Economics at the University of the West Indies, Cave Hill Campus, plays a key role in this regard by training the next generation of decision-makers. Many former students in the Department have gone on to pursue careers in finance (e.g. commercial banks, international banks, finance companies, to name a few), industry, government and international financial institutions (Inter-American Development Bank, Caribbean Development Bank, International Monetary Fund, among others). Feel free to discuss your career options with your lecturers and tutors at anytime. The University also offers a career counselling service as well.

I am also proud of the Department's research programme as well as its outreach to stakeholders in the Eastern Caribbean and further abroad. Through our working paper series we tackle issues that impact on the performance of business, the environment, and society. Our research is also disseminated in international journals and books, which are available through the University's library. It is my hope that you would take the opportunity to attend and participate in the Department's panel discussion series, research seminars and training sessions that we offer to students and our wider community.

It is truly an exciting time to be studying economics. It is my hope that your stay with us will be both productive and enjoyable.

Sincerely

Winston Moore, PhD

FOREWORD

The teaching of Economics began in the mid 1960s within the Division of Survey Courses and Social Sciences (later renamed the Division of General Studies and Social Sciences) when the Barbados Campus of the University of the West Indies (UWI) was situated at the Harbour Site. When the Campus moved to its current location at Cave Hill in September 1967, Economics teaching and research continued within the Division until it was abolished in 1972. On August 1, 1972, the Department of Economics was formed within the Faculty of Arts and General Studies. When the Faculty of Social Sciences was established in 1975 at Cave Hill, the Department became a unit within the Faculty.

The Department of Economics is responsible for the teaching of Economics and Quantitative Methods (Mathematical and Statistical) courses within the Faculty of Social Sciences. This Handbook outlines the programmes and courses offered by the Department and is a supplement to the Faculty Handbook.

The Department seeks to provide programmes which enable students to pursue careers in many different areas. The undergraduate programmes provide students with a firm foundation in the principles of economic analysis and their application. Undergraduate degree programmes assume no prior knowledge of economics, so that the Department admits students with various backgrounds into its degree programmes.
